Students who want to continue living on campus during the school year who earn an easier time registering for housing. Sign-up in person and student will be able to choose their residence hall roommate and even the room they would prefer to live in.

*This has been a dream for a long time,* said布莱斯·斯特林, associate director for housing administration. "We want to empower students. We want them to know they have options and that they matter.""All sessions are sign-up for next year started Monday and will run for three phases. For the first two weeks, students who currently live in the residence halls will only be able to reserve the same room to live in next year. Because of reorganization issues, such as the implementation of the Intercultural Community Living,” Center and the transformation of the East Arrows into a female-only dormitory, all rooms will be available for use by students only. Students can try to register for their same room after this phase is over, but after Oct. 14, their rooms will no longer be guaranteed.

The second phase of sign-ups starts on Oct. 15 and will be for those who have committed to living on campus for two years and who want a room that is different from their current one. Students who are looking to move for financial reasons, all Baylor students will be able to sign up for housing. Though there is no deposit required to sign up, once students agree to the occupancy license, there are no cancellations or refunds. Withdrawals from the university do not automatically result in the release of your room.

Incoming freshmen will use different registration process for current students will use a lottery system for choosing residence halls. At the moment, there is no real good idea and signing up online would be a lot easier than doing paperwork."
**The Baylor Lariat**

**Baylor should be more friendly to groups of disbelief**

The United States has always been a melting pot of an amalgamation of cultures, nationalities and beliefs. Along with this comes the duty of fairness, equality and respect. Not all students at Baylor, however, have been given the same respect they warrant.

Religion plays a large role in the majority of people's lives. For many, it is a faith that is passed down from generation to generation and is a part of their everyday lives. In America, however, a majority of people are religious, and I believe that is a good thing because religion is what brings us together. I don't believe that anyone should have the right to tell others what they should believe in.

I believe that everyone should have the freedom of choice to believe in whichever faith they choose, or not to believe in anything at all. It doesn't matter to me who you are, or what you believe, but I am sure that everyone deserves to be treated with respect and kindness. I feel that if you believe that a certain faith is the only way to be good, then you should be polite to people who believe in other things, and vice versa.

I believe that we should all be able to coexist in this world and live with one another, regardless of our beliefs. We should be able to respect each other and have a peaceful coexistence. We should all be able to agree to disagree and move on. I believe that everyone should be given the same freedom of choice and respect that they deserve.

In conclusion, I believe that everyone should be given the freedom of choice to believe in whichever faith they choose, or not to believe in anything at all. It doesn't matter to me who you are, or what you believe, but I am sure that everyone deserves to be treated with respect and kindness. I feel that if you believe that a certain faith is the only way to be good, then you should be polite to people who believe in other things, and vice versa.

The Baylor Lariat is a student newspaper and does not represent the views of the Baylor administration, Baylor Board of Regents or the Baylor Board of Visitors. **Correction**

The Sept. 20 article "Minor interest" by Lindsay Chromister was factually inaccurate. Dr. Liz Palacios, associate dean for diversity and inclusion, stated that the quote should be "close to home and are very familiar with the topic." The Lariat regrets the error.

**Letters to the editor**

Evidence clear for evolution

After the Sept. 25 issue of Evolutionary Drums, which was funded with letters, the evolution debate continued. A student wrote an article stating that evolution is a fact. The student included several articles and letters in the issue, and I would like to add my two cents to the discussion.

As a biology major myself, I have read the textbook, The Origin of Species, by Charles Darwin. In this book, Darwin presented his theory of evolution, which states that species evolve over time. He also provided evidence to support his theory, such as the fossil record, which shows that species change over time.

Another piece of evidence for evolution is the fact that species can adapt to their environment. For example, peppered moths have evolved to have more white coloration, which makes them more camouflaged in their environment.

In conclusion, I believe that evidence is clear for evolution. The theory of evolution is supported by numerous pieces of evidence, and it is a scientific fact.

**Baylor buys $1.25 million supercomputer**

By Kathleen Williams

Baylor University has purchased a $1.25 million high-performance computing cluster from Hewlett-Packard that will be used in addition to the current balanced cluster, to further strengthen Baylor’s research capabilities by allowing researchers to conduct their research much more quickly and efficiently.

**January 27, 2007**

President John Lilley and Hewlett-Packard CEO Mark Hurd both Baylor alumni, were on campus for the dedication of the computing cluster.

Baylor began the process of purchasing the cluster in 2005 but bought the balanced cluster instead after Mike Hinscheidt, assistant vice president for information technology, considered other vendors.

Byron Bledsoe was appointed to be the associate provost for research. His duties include purchasing the new computing cluster and overseeing the addition of a new cluster to its scientific computing system.

Baylor’s new high-performance computing cluster, named "Kodiak" in honor of the university’s mascot, will be housed in the ITS server room located in the Houston Academic Center, with plans to upgrade the server room in two years.

There will be, however, a significant reduction in the number of people running the system.

Baylor’s new computing cluster is 10 times faster. It is expected to run the system 24/7 for a cost of less than $20,000 per year. The new computing cluster will be housed in the ITS server room located in the Houston Academic Center.

**Lecturer talks about Plato, Jewish Talmud**

By Susanne Gilkey

What would sound like another language to most people is the normal vernacular for thousands of Baylor students.

Jacob Howland, Ms. Farlin, professor of New Testament from the University of Maryland, showed viewers how to make sense of the difference between the two Talmuds.

The Jerusalem Talmud exists in two forms: the Jerusalem Talmud and the Babylon Talmud. The Jerusalem Talmud is a collection of oral traditions from the first centuries A.D. to the sixth centuries A.D. It contains the teachings of sages, which were passed down from generation to generation. The Babylon Talmud is a collection of oral traditions from the first centuries A.D. to the sixth centuries A.D. It contains the teachings of sages, which were passed down from generation to generation.

The Battle of the Brazos began Thursday night with the Aggies trailing, but Baylor didn't fare too well. The Bears failed to ignite, however, and Texas A&M swept the Lady Bears volleyball loss, 3-0.

"We had some statistical advantages, but didn't play as well on the second half," said Freshman Courtney Breyfogle from the Aggies. "We just really wanted to win this time."

With the loss, Baylor falls to 5-14 on the season, and 0-10 in Big 12 conference play. However, Baylor's lone victory on the season came over Nebraska on Saturday, all the Lady Bears in the chase.

"It's just not going to fly. We were just disoriented out performances. Freshman killed us," said Ashlie Christenson.

"We'd get some rallies, but their defense was amazing, they made us miss a lot of shots," said Freshman Ashlie Christenson.

Judge declares mistrial in Spector case

By Helay Frank

The Los Angeles Superior Court in Los Angeles on Wed. The Phil Spector murder trial, which opened in January, ended in a mistrial after the jury could not reach a verdict.

The prosecutor’s office announced the mistrial and said they would seek a new trial, which could happen as soon as mid-September. However, the defense has the option to appeal the verdict.

The trial, which lasted four months, was one of the most controversial and divisive cases in recent history. Spector was charged with murder in the 2003 death of actress Lana Clarkson.

The defense argued that Spector was not guilty and that there was insufficient evidence to convict him.

The prosecution, on the other hand, maintained that there was enough evidence to prove Spector’s guilt.

The mistrial came after the jury deliberated for over 22 hours without reaching a verdict.

The judge declared a mistrial after the jury deadlocked 10-2 in favor of Spector.

The trial was marked by controversy from the beginning, with Spector’s defenders arguing that he was being unfairly treated.

The mistrial also disappointed some of the prosecutor’s office, who had hoped for a guilty verdict.

The defense, on the other hand, was not surprised by the outcome.

“I knew this was going to happen,” said John O’Donnell, Spector’s attorney. “From the beginning, we knew we were going to win.”

The case has been a major talking point for years, with many people expressing opinions on both sides of the issue.

Some have argued that Spector was rightly convicted, while others believe that he was wrongfully accused.

The mistrial has now opened the door for a new trial, which could take place as soon as mid-September.

The judge declared mistrial in the murder case against Phil Spector when the jury, which deliberated for a total of 22 hours, could not reach a verdict. The 10-2 split in favor of Spector resulted in the mistrial, which was declared on Wednesday in Los Angeles Superior Court.

The trial, which opened in January, was one of the most controversial and divisive cases in recent history. Spector was charged with murder in the 2003 death of actress Lana Clarkson.

In a statement, Spector’s attorney John O’Donnell said, “This is a terrible day for justice and for the truth. Phil Spector has been convicted but not beyond a reasonable doubt.”

The prosecution had sought a guilty verdict, arguing that there was enough evidence to prove Spector’s guilt.

The defense, on the other hand, maintained that there was insufficient evidence to convict him. The trial was marked by controversy from the beginning, with Spector’s defenders arguing that he was being unfairly treated.

The judge declared mistrial after the jury deliberated for over 22 hours without reaching a verdict. The judge declared the mistrial after the jury deadlocked 10-2 in favor of Spector.
